Airand — Business Requirements Document (BRD)

Oct 6, 2026 · @Francis · Phase 4 — Gap Analysis & Business Requirements · v1.0 draft

1. Document control

Item	Detail
Document	Business Requirements Document — Airand zone-based food delivery
Version	1.0 draft
Status	For review by the business sponsor
Author	Business Analyst (portfolio project)
Sponsor	Founder, Airand (Okoro Assumpta)
Approval required from	Sponsor

Version history

Version	Date	Change
0.1	5 Oct 2026	Phases 1–3 inputs consolidated
1.0 draft	6 Oct 2026	Gap analysis, business requirements and business rules added; sponsor decisions on assignment, payment and tracking incorporated. Rev 1.1 same day: fee paid to Airand at request and held until completion; cyclist earning credited only on completion (RUL-02); tiered refunds with 20% cancellation fee after assignment (RUL-04, RUL-05); vendor delay detected by the system (RUL-17). Rev 1.2, 6 Oct 2026: package scope (BR-23, RUL-24); dispatcher renamed system admin (Chinedu); receiver view limited to pickup and arrival (BR-14)

Evidence labels used throughout: [Source] cited external material or the original Airand plan · [Assumption] unvalidated estimate · [Simulated] constructed for portfolio demonstration · [Decision] a sponsor decision taken for this project.

2. Executive summary

Airand needs an operating model and a supporting platform that give small vendors — food vendors first — in one New Owerri zone pre-positioned bicycle package delivery at a fixed, prepaid fee, assigned automatically and recorded end to end. This document states what the business needs to achieve that; the SRS will state what the system must do.

The need arises from four root causes in today's delivery process: no committed capacity at peak, no record of any delivery, no pricing rule, and unstructured address capture. Together they produce the twelve pain points vendors, receivers and riders described, from lost late-night orders to disputes settled by memory. The gap analysis in section 8 closes each root cause with a desired state; section 9 states 23 business requirements traced to those gaps and to the business objectives; section 10 fixes the business rules the sponsor has decided — system assignment, payment before activation, a receiver tracking link.

Viability depends on volume: the unit-economics model breaks even at about 46 deliveries a day in the zone at a ₦900 rate with 10 cyclists. The requirements therefore include sizing cyclist capacity to measured demand and recruiting anchor vendors with 30+ orders a day.

3. Business background

Airand is a delivery-as-a-service concept for food vendors in New Owerri, Imo State, originated in a 2025 business plan by founder Okoro Assumpta and not yet launched [Source: original plan; Decision: founder confirmation, Oct 2026]. The original plan stationed one bicycle cyclist outside each partner eatery, tracked orders on paper slips, and billed eateries weekly.

In October 2026 the concept was reframed after research showed the market had changed: Chowdeck entered Owerri in February 2025, Bolt Send in August 2026, and local start-ups GoBuyMe, Karryo and ShabraErrands offer or promise on-demand delivery with upfront pricing [Source: Market & Competitor Research]. The reframed Airand:

- serves small, mostly unlisted food vendors of any kind (restaurants, bukas, suya spots, kitchens, drinks sellers) in a dense neighbourhood zone;
- stations a shared pool of cyclists at a zone hub rather than one per vendor;
- charges a fixed zone rate per delivery to whoever requests it, paid at request time;
- replaces paper slips with a digital delivery lifecycle and a receiver verification code.

The competitive position that survived research is narrow and operational: nobody else keeps dedicated capacity *in the neighbourhood, at a flat price, through the 7–11 PM peak*. One simulated vendor already pays informal riders a daily retainer to do this and gets neither reliability nor records [Simulated: Phase 3, persona V-6]. Airand makes an existing behaviour dependable and visible.

4. Problem statement

Small food vendors in New Owerri can get *a* rider from several apps, but none offers delivery that is pre-positioned, fixed-price and reliable at the 7–11 PM peak. On-demand couriers send a rider from wherever they are and price each trip by demand; marketplaces take 20–30% of food value and expect formal registration; informal riders are unpredictable in cost, timing and loyalty. For a vendor doing repeated short deliveries from one spot, every option is the wrong shape at exactly the hour demand is highest.

Consequences today [Simulated: Phase 3 elicitation]

- Vendors lose late orders when no rider will go, and cannot quote a delivery fee when taking an order
- Food waits a median 18 minutes after it is ready for a rider to arrive
- Receivers pay a fee they did not know, call the vendor for updates, and sometimes get cold food or the wrong order
- Nobody has a record: disputes, costs and performance are matters of memory

Problem owner: the founder. **Affected:** vendors (S-01), receivers (S-02), riders/cyclists (S-03).

5. Business objectives and success criteria

Six objectives, each with a measurable pilot criterion. Targets marked [Source] come from the original plan; [Assumption] targets come from the economics model or analyst judgement and should be confirmed with the sponsor.

ID	Objective	Success criterion (end of 3-month pilot)	Label
OBJ-01	Deliver reliably at peak	⩾ 95% of requests between 7 and 11 PM assigned a cyclist within 2 minutes; ⩾ 90% picked up within 5 minutes of vendor marking food ready	[Assumption]
OBJ-02	Deliver fast	⩾ 85% of deliveries completed within 30 minutes of pickup	[Source] 20–30 min promise
OBJ-03	Make delivery cost predictable	100% of requests priced at the published zone rate before payment; zero negotiated fees	[Decision]

ID	Objective	Success criterion (end of 3-month pilot)	Label
OBJ-04	Reach viable volume	⩾ 50 deliveries/day zone average by month 3 (break-even ≈ 46 at ₦900 with 10 cyclists); ⩾ 8 active vendors including ⩾ 2 anchors at 30+ orders/day	[Source] 50–100/day; [Assumption] anchors
OBJ-05	Record and prove every delivery	100% of deliveries closed by receiver code or a logged exception; weekly statement available to every vendor	[Decision]
OBJ-06	Operate legally and safely	CLRD Regional licence held before first paid delivery; zero uninsured incidents	[Source] CLRD

6. Stakeholders summary

Full register and power/interest grid are in the Phase 3 document. The four "manage closely" stakeholders own the requirements below.

ID	Stakeholder	Role in this BRD	Key need
S-01	Food vendors	Primary customer; requirements owner for request, pricing, history	Request in seconds, know the price, see every delivery
S-02	Receivers	Beneficiary	Hot food fast; know where it is; confirm it is theirs
S-03	Cyclists	Workforce; requirements owner for assignment and handover	Clear jobs, steady pay, no blame for food not ready
S-04	System admin (Chinedu)	Internal user; requirements owner for monitoring and exceptions	See everything, intervene fast

ID	Stakeholder	Role in this BRD	Key need
S-05	Founder	Sponsor; approves this document and all business rules	Volume, margin, control of pricing and onboarding
S-06	NIPOST CLRD	Regulator	Licensed operation, complaint handling

7. Current state summary

A direct order today passes through ten manual steps across vendor, rider and receiver, fails at five of them, and produces no record. The full AS-IS diagram, journey maps and pain-point log are in the Phase 3 document; the twelve pain points reduce to four root causes.

Root cause	Pain points	Who feels it most
RC-1 No committed, pre-positioned capacity	PP-01 no rider at peak · PP-03 food waits for rider · PP-04 rider diverts to better fare · PP-12 riders chase fares, no loyalty	Vendors, receivers
RC-2 No record and no visibility	PP-05 nothing recorded · PP-07 receiver calls vendor · PP-09 complaints land on vendor · PP-10 wrong recipient, no proof · PP-11 no cost or performance view	Vendors, Airand
RC-3 No pricing rule	PP-02 fee negotiated per trip · PP-08 vendor cannot quote a fee	Vendors, receivers
RC-4 Unstructured address and contact capture	PP-06 receiver unreachable, wrong flat	Riders, receivers

Three AS-IS variants exist: a retained-rider arrangement (closest to Airand, fails on reliability and records), per-order on-demand app requests (fixes price and availability off-peak, not peak or pickup wait), and self-delivery on foot (no reach).

8. Gap analysis

Each root cause is closed by a desired state; the gap between them is what the business requirements must fill. Priorities are MoSCoW for the pilot.

Gap	Root cause	Current state	Desired state	What must change	Pain points closed	Priority
G-01 Capacity	RC-1	Vendor phones freelance riders; none obliged to come; capacity collapses after 10 PM	A scheduled pool of Airand cyclists at a zone hub, sized to measured demand, rostered to 7–11 PM	Zone definition; hub; cyclist roster and retainer pay; capacity planning from data	PP-01, 03, 12	Must
G-02 Assignment	RC-1	Assignment is whoever answers the phone	The system assigns the nearest available cyclist automatically within seconds; system admin intervenes only on exceptions	Assignment rule; cyclist availability state; system admin override	PP-01, 04	Must
G-03 Delivery record	RC-2	Verbal handover, notebook of amounts owed	Every delivery has a timestamped lifecycle: requested → paid → assigned → picked up → delivered/failed	Status lifecycle; pickup confirmation; receiver code at handover; failure reason capture	PP-05, 09, 10	Must
G-04 Visibility	RC-2	Vendor and receiver learn nothing until someone calls	Vendor sees all active and past deliveries; receiver can open a status link; system admin sees the whole zone live	Vendor history view; receiver tracking link; live admin console	PP-07, 09, 11	Must
G-05 Pricing	RC-3	Fee negotiated per trip, varies with time and weather	One published zone rate, shown before the request is confirmed, identical at peak	Pricing rule by zone; rate displayed at request	PP-02, 08	Must

Gap	Root cause	Current state	Desired state	What must change	Pain points closed	Priority
G-06 Payment	RC-2, RC-3	Cash settled with rider later, from memory	Requester pays the fixed fee at request time; request activates on confirmed payment; weekly statement generated from records	Payment at request; wallet or transfer confirmation; statement	PP-05, 11	Must
G-07 Address and contact	RC-4	Address given verbally; rider calls for directions	Drop-off address and receiver phone captured once in a structured form; code and link sent automatically	Structured request form; messaging integration; exception path when unreachable	PP-06	Must
G-08 Performance data	RC-2	None	Management sees volume, timings, failures, revenue and cyclist utilisation by day and hour	Reporting from the delivery record	PP-11	Should
G-09 Compliance	—	Unlicensed informal activity	Airand holds a CLRD Regional licence and meets its operating standards	Licence, CAC registration, complaints handling, trained staff	—	Must
G-10 Vendor onboarding	—	Vendor–rider relationships are personal and informal	Vendors join in one day with a simple agreement, trial period and wallet	Onboarding process; trial rule; vendor agreement	—	Should

9. Business requirements

23 requirements, stated as business needs rather than system features, each traced to a gap, an objective and the stakeholder who owns it. "The business shall" means Airand as an organisation; how a system supports each is for the SRS.

Operating model and capacity

ID	Requirement	Gap	Objective	Owner	Priority
BR-01	The business shall operate in defined zones, each with a hub location and a boundary within which deliveries are accepted	G-01	OBJ-01	S-05	Must
BR-02	The business shall station a pool of trained cyclists at each zone hub during published operating hours, rostered so that capacity peaks between 7 and 11 PM	G-01	OBJ-01	S-05	Must
BR-03	The business shall size each zone's cyclist pool from measured demand, reviewed at least monthly, so that the pool can break even at the published rate	G-01	OBJ-04	S-05	Must
BR-04	The business shall pay cyclists a guaranteed shift retainer rather than per-delivery only, so that cyclists remain available at the hub between jobs	G-01	OBJ-01	S-03	Must

Requesting and pricing

ID	Requirement	Gap	Objective	Owner	Priority
BR-05	The business shall allow an onboarded vendor to request a delivery for one of its own orders by supplying the drop-off address and the receiver's phone number; the pickup location is the vendor's registered address	G-07	OBJ-01	S-01	Must
BR-06	The business shall charge one published fixed rate per delivery within a zone, the same at all hours, shown to the requester before the request is confirmed	G-05	OBJ-03	S-05	Must
BR-07	The business shall accept a delivery request only once payment of the fixed rate is confirmed; an unpaid request shall not be assigned	G-06	OBJ-03	S-05	Must
BR-08	The business shall decline, with a reason, any request whose drop-off lies outside the zone boundary	G-01	OBJ-01	S-04	Must

Assignment and fulfilment

ID	Requirement	Gap	Objective	Owner	Priority
BR-09	The business shall assign each paid request to an available cyclist automatically, according to the assignment rule in section 10, without manual intervention in the normal case	G-02	OBJ-01	S-04	Must
BR-10	The business shall enable a system admin to see every active request and cyclist in the zone and to reassign, cancel or escalate any delivery	G-02, G-04	OBJ-01	S-04	Must
BR-11	The business shall record the moment the vendor hands food to the cyclist and the moment the receiver confirms receipt, so that pickup wait and delivery time are measurable for every delivery	G-03	OBJ-02, OBJ-05	S-03	Must
BR-12	The business shall confirm delivery to the correct person by a one-time verification code sent to the receiver's phone and presented to the cyclist at handover	G-03	OBJ-05	S-02	Must
BR-13	The business shall define and follow an exception procedure when a receiver cannot be reached, when food is not ready, or when a cyclist cannot complete a job, and shall record the reason and outcome of every exception	G-03	OBJ-05	S-04	Must

Visibility and records

ID	Requirement	Gap	Objective	Owner	Priority
BR-14	The business shall give every receiver, in the same message as the verification code, a way to see the expected arrival of their delivery, limited to what concerns them: when it was picked up and when it arrives, without payment, assignment or other internal details	G-04	OBJ-02	S-02	Must
BR-15	The business shall give each vendor a view of its active deliveries and a history of completed and failed deliveries with timestamps, fees paid and outcomes	G-04	OBJ-05	S-01	Must
BR-16	The business shall produce a weekly statement for each vendor from the delivery record, listing deliveries, fees paid and any exceptions	G-06	OBJ-05	S-01	Must

ID	Requirement	Gap	Objective	Owner	Priority
BR-17	The business shall report, for management, delivery volume, request-to-assignment time, pickup wait, delivery time, failure rate, revenue and cyclist utilisation by zone, day and hour	G-08	OBJ-04	S-05	Should

Onboarding, workforce and compliance

ID	Requirement	Gap	Objective	Owner	Priority
BR-18	The business shall onboard a vendor within one working day on the basis of a name, address, phone number and payment method, with no requirement for company registration	G-10	OBJ-04	S-01	Should
BR-19	The business shall offer new vendors a one-week trial at no delivery charge, after which the published rate applies	G-10	OBJ-04	S-05	Should
BR-20	The business shall train and equip every cyclist (insulated bag, uniform, lights, phone) before their first delivery, and keep a record of training	G-09	OBJ-06	S-03	Must
BR-21	The business shall hold a NIPOST CLRD Regional licence and CAC registration before the first paid delivery, and shall operate a complaints procedure meeting CLRD standards	G-09	OBJ-06	S-05	Must
BR-22	The business shall retain delivery, payment and exception records for at least 12 months for dispute resolution and regulatory inspection	G-03, G-09	OBJ-05, OBJ-06	S-05	Must

Package scope (added 6 Oct 2026)

ID	Requirement	Gap	Objective	Owner	Priority
BR-23	The business shall accept any package a cyclist can safely carry by bicycle, within published limits on size, weight, declared value and prohibited items, and shall allow a cyclist to refuse a package that breaches them	G-01, G-09	OBJ-01, OBJ-06	S-05	Must

10. Business rules

Rules are the sponsor's decisions on how the business behaves; they are fixed here so the SRS can implement them without reinterpretation. Rules marked [Decision] were taken by the sponsor on 6 Oct 2026; [Assumption] rules are analyst defaults awaiting confirmation.

Pricing and payment

ID	Rule	Label
RUL-01	One fixed rate applies to every delivery within a zone, regardless of distance within the zone, time of day, weather or order value. Pilot rate: ₦900 (target band ₦700–₦1,000; set by the sponsor, reviewed monthly)	[Decision] fixed rate; [Assumption] ₦900
RUL-02	The requester pays the fixed rate to Airand when confirming the request; the request is *Pending payment* until payment is confirmed and becomes *Active* only then. Airand holds the fee and does not recognise it as revenue, nor credit the cyclist's per-delivery earning, until the delivery is *Delivered* or *Failed* after pickup. Unconfirmed requests expire after 10 minuteswith the hold released	[Decision] payment validates; [Assumption] 10 min
RUL-03	Payment is by vendor wallet (prepaid, topped up by bank transfer) or by transfer per request; cash is not accepted for delivery fees	[Assumption]

ID	Rule	Label
RUL-04	Refunds are tiered: cancelled before a cyclist is assigned, the full fee returns to the wallet; cancelled after assignment but before pickup, a cancellation fee of 20% (₦180 at the pilot rate) is released to Airand for the cyclist's ride and the balance refunded; after pickup, no cancellation by the vendor and no refund	[Assumption]
RUL-05	A failed handover after pickup (receiver unreachable after the exception procedure) releases the full fee to Airand; the food is returned to the vendor	[Decision] 6 Oct 2026; [Assumption] return of food
RUL-06	New vendors receive a 7-day trial during which the fee is ₦0; requests are still created and paid at ₦0 so the record is complete	[Source] original plan

Zones and capacity

ID	Rule	Label
RUL-07	A zone is a polygon around a hub with a nominal radius of 2.5 km. Pickup must be a registered vendor address inside the zone; drop-off must be inside the zone or the request is declined with the reason "outside zone"	[Assumption]
RUL-08	Zone operating hours for the pilot: 12:00–23:30 daily. Requests outside hours are declined with the reason "zone closed"	[Assumption]
RUL-09	Cyclist shifts are rostered weekly; at least 60% of rostered cyclist-hours fall between 18:00 and 23:30	[Assumption]

ID	Rule	Label
RUL-10	Cyclist pay is a guaranteed shift retainer plus a per-delivery bonus above a daily threshold; the threshold is set so that the model's break-even (≈ 4.6 deliveries per cyclist per day) is covered by the retainer alone	[Assumption]

Assignment

ID	Rule	Label
RUL-11	On activation the system assigns the request to the cyclist who is *Available* and nearest to the pickup; ties are broken by the longest time since the cyclist's last assignment	[Decision] system assigns; [Assumption] rule detail
RUL-12	A cyclist may be *Available*, *Assigned*, *En route to pickup*, *Waiting at vendor*, *Delivering*, or *Off shift*. Only *Available* cyclists receive assignments	[Assumption]
RUL-13	An assigned cyclist must acknowledge within 60 seconds; otherwise the request is reassigned to the next cyclist by RUL-11 and the system admin is alerted	[Assumption]
RUL-14	If no cyclist is *Available*, the request queues as *Awaiting cyclist*; the vendor is told the expected wait; the system admin is alerted after 3 minutes	[Assumption]
RUL-15	The system admin may override any assignment, reassign a delivery, or mark a cyclist *Off shift*; every override is recorded with a reason	[Decision]

Fulfilment and exceptions

ID	Rule	Label
RUL-16	On assignment the receiver is sent one message containing a 4-digit verification code and a tracking link. The code is valid for that delivery only	[Decision] tracking link; [Assumption] 4 digits
RUL-17	Arrival at the vendor is recorded by the cyclist's tap or automatically by location; pickup is recorded when the cyclist confirms handover. If handover is not confirmed within 5 minutes of arrival, the system flags a *vendor delay* automatically; the delay is attributed to the vendor and excluded from the cyclist's performance. No cyclist action is required	[Assumption]
RUL-18	Delivery is recorded when the cyclist enters the receiver's code. If the receiver cannot produce the code but is present and confirms identity by phone number, the cyclist may record *Delivered without code* with a reason, which the system admin reviews	[Assumption]
RUL-19	If the receiver is unreachable: the cyclist waits 10 minutes at the address and makes two phone attempts; the system admin attempts the vendor's customer number once; if still unreachable the delivery is marked *Failed — receiver unreachable* and the food is returned to the vendor	[Assumption]
RUL-20	A vendor may cancel a request before pickup; after pickup only the system admin may cancel. Every cancellation records who cancelled and why	[Assumption]

Records and reporting

ID	Rule	Label
RUL-21	A delivery's lifecycle is: Pending payment → Active → Awaiting cyclist (optional) → Assigned → Picked up → Delivered, or → Failed, or → Cancelled. Every transition is timestamped and attributed	[Assumption]
RUL-22	Weekly statements run every Monday for the preceding Monday–Sunday and are available to the vendor the same day	[Assumption]
RUL-23	The system admin receives an alert for any delivery not picked up within 10 minutes of assignment or not delivered within 30 minutes of pickup	[Assumption]

Package limits (added 6 Oct 2026)

ID	Rule	Label
RUL-24	A package must fit the cyclist's 40-litre carrier bag, weigh no more than 8 kg, have a declared value of no more than ₦50,000, and not be on the prohibited list (cash, weapons, drugs, hazardous or flammable goods, live animals, anything illegal). The vendor confirms this at request; the cyclist may refuse at pickup, which cancels the request with the post-assignment cancellation fee applied	[Assumption] limits; value cap aligned with Bolt Send's published ₦50,000 limit [Source]

11. Scope

The pilot is one zone, small food vendors, direct orders, bicycles, prepaid fixed-rate requests and a vendor-initiated platform with a receiver status link. Deferred items have a reason; nothing is dropped silently.

Scope decision, 6 Oct 2026 — from food to packages. The sponsor broadened the platform from food delivery to package delivery for small vendors, so the product is not limited before the pilot proves the model. The **pilot segment remains food vendors**: all

Phase 2–3 evidence (nightlife peak, retained-rider behaviour, price comparison) is about food, and the beachhead should be where the evidence is. The platform, rules and language are package-neutral; food is one package category. Consequences: package limits (BR-23, RUL-24); Bolt Send becomes a more direct competitor for non-food packages, where Airand's peak-time advantage is weaker; the Business Understanding Document and Market Research reflect the food-only framing at the time they were written and are kept as the record.

Area	In scope (pilot)	Deferred (with reason)	Out of scope
Geography	One zone around a World Bank Road hub, New Owerri (candidate; to be confirmed by vendor count)	Second and further zones once the first sustains ≥ 50 deliveries/day for 4 weeks	Other cities
Vendors	Any food vendor inside the zone, registered or not	Larger eateries wanting overflow capacity — needs a different pricing model	Non-food merchants
Order source	The vendor's own direct channels	Customer-initiated requests — needs a consumer app and payment; marketplace API — no partner yet	Airand as an ordering marketplace
Fleet	Bicycles	Motorbikes for longer hops — changes licence, cost and insurance	Cars, inter-city
Requesting and payment	Vendor request form; wallet or transfer-per-request; payment before activation	Card payment; receiver-pays option — requires consumer payment flow	Commission on food
Assignment	System auto-assignment with system admin override	Route optimisation; batching two orders per trip — needs volume data	—

Area	In scope (pilot)	Deferred (with reason)	Out of scope
Visibility	Receiver status link with ETA; vendor active/history views; live admin console	Live map for receivers; vendor-facing analytics beyond the weekly statement	—
Proof of delivery	Receiver code; pickup confirmation	Photo proof; signature	—
Reporting	Management KPIs by zone, day, hour	Forecasting; cyclist incentive analytics	—

12. Assumptions and constraints

Assumptions (full register A-01 to A-20 in the Business Understanding Document and Market Research; the ones that bear directly on these requirements)

ID	Assumption	Status	Impact if wrong
A-07	The zone can generate ⩾ 50 deliveries/day by month 3	Open; requirement, not target	Pool must shrink (BR-03) or pilot is loss-making
A-10	⩾ 8 vendors including 2 anchors exist within 2.5 km of the hub	Open; map exercise pending	Zone relocates or widens
A-12	Vendors will prepay a fixed ₦900 fee	Open	Rate or payment rule (RUL-01/02) changes
A-13	Receivers can receive and relay a WhatsApp/SMS code	Open	Exception path (RUL-18/19) carries more volume
A-14	Vendors will use an app to request	Open	Phone-to-system admin fallback needed
A-15	CLRD Regional licence applies and is obtainable before launch	Confirmed applies; fee and timeline unknown	Launch date and fixed costs move

Constraints

ID	Constraint	Source
CON-01	Bicycles only in the pilot; range limits the zone to ~2.5 km	Founder non-negotiable [Simulated E-06]
CON-02	Platform budget is modest: an MVP a small team can build, not a marketplace-scale app	Founder [Simulated E-06]
CON-03	Cyclist app must work on low-cost Android phones with intermittent data	Cyclist elicitation [Simulated E-05]
CON-04	No courier operation without CLRD licence and CAC registration	NIPOST Act s.45 [Source]
CON-05	Delivery fee is the only revenue; no commission on food	Sponsor positioning [Decision]

13. Risks

Risks to achieving the requirements, carried from Phase 1 and updated. R-01 and R-02 remain the two that could invalidate the model.

ID	Risk	Likelihood	Impact	Mitigation in these requirements
R-01	Zone volume stays below ~46 deliveries/day	Medium	High	BR-03 sizes the pool to demand; OBJ-04 requires anchor vendors; monthly review
R-02	Vendors resist prepaying a fixed fee	Medium	High	RUL-06 free trial; wallet keeps top-ups infrequent; rate reviewed monthly
R-03	A competitor (Karryo, Bolt Send) adds retained or scheduled capacity	Medium	High	Speed to pilot; vendor relationship and records as switching cost

ID	Risk	Likelihood	Impact	Mitigation in these requirements
R-04	Auto-assignment makes poor choices in edge cases (stale location, unavailable cyclist)	Medium	Medium	RUL-13 acknowledgement timeout; RUL-15 system admin override; RUL-23 alerts
R-05	Code handover fails often (phones off, no network)	High	Medium	RUL-18/19 exception path; A-13 to be tested in week one
R-06	Cyclist safety at night; bicycle theft	Medium	High	BR-20 equipment; hub storage; insurance line in economics
R-07	CLRD licence delayed or costly	Medium	High	BR-21 before first paid delivery; placeholder in budget; apply at project start
R-08	Payment confirmation latency delays activation at peak	Medium	Medium	Wallet as default payment (RUL-03) so confirmation is instant
R-09	Vendors keep phoning instead of using the app	Medium	Medium	Request flow under 30 seconds (SRS NFR); system admin can raise a request on a vendor's behalf as a fallback
R-10	Portfolio risk: simulated findings read as real	Low	High	Evidence labels on every claim; Simulated stated in each document's summary

14. Glossary

Term	Meaning in this document
Anchor vendor	A vendor generating 30 or more deliveries a day, whose volume underwrites a zone's cyclist pool
Assignment	The act of attaching an available cyclist to an active request; automatic under RUL-11
Buka	A small informal eatery serving local dishes

Term	Meaning in this document
Cyclist	An Airand-employed bicycle rider stationed at a zone hub
Delivery	One paid request from pickup at a vendor to handover to a receiver
System admin	The Airand operations officer (Chinedu in the pilot) who monitors a zone, handles exceptions and holds configuration rights; formerly called the dispatcher
Hub	The physical point in a zone where cyclists wait between deliveries
Receiver	The vendor's customer who receives the food
Request	A vendor's instruction to deliver one order; becomes a delivery once paid and assigned
Retainer	Guaranteed pay for a cyclist's shift, independent of deliveries completed
Statement	The weekly record of a vendor's deliveries and fees
Tracking link	A web link in the receiver's message showing delivery status and expected arrival
Vendor	Any food business onboarded to request deliveries from Airand
Verification code	A one-time 4-digit code sent to the receiver and entered by the cyclist to close the delivery
Wallet	A prepaid vendor balance from which delivery fees are deducted
Zone	A bounded area, nominally 2.5 km around a hub, within which Airand accepts deliveries at one fixed rate
BR / RUL / OBJ / G / PP / RC / A / R / CON	Identifier prefixes: business requirement, business rule, objective, gap, pain point, root cause, assumption, risk, constraint
